The implementation of clinical pathways in Indonesia has also been mandatory since accreditation for hospitals based on the accreditation standards of the Hospital Accreditation Committee version 2012 as an effort to create good clinical governance. The phenomenon obtained by Clinical Nurses II and III researchers has not completed complete clinical pathways documents in accordance with hospital accreditation standards. The low documentation of filling out the clinical pathways sheet was found to be 30% during 2023 where the percentage of incompleteness of the clinical pathway form should be 0%. The purpose of this study is to identify the level of knowledge (know) of nurses about the documentation of clinical pathways at Budi Rahayu Catholic Hospital Blitar. The research design used was descriptive with a total of 42 respondents using the purposive sampling technique. Research variables of nurses' knowledge about clinical pathways documentation. The research instrument used a questionnaire sheet. The results of the study showed that most of the respondents' knowledge level about clinical pathways documentation was 73.8% had good knowledge. The results of the study found that information sources and socialization greatly influenced the level of knowledge of nurses. The author provides advice to nurses to increase compliance, responsibility and motivation in the documentation of clinical pathways in accordance with PNPK information sources.

Key word: Knowledge, Clinical pathways, Documentation

ABSTRAK

GAMBARAN TINGKAT PENGETAHUAN (TAHU) PERAWAT TENTANG DOKUMENTASI *CLINICAL PATHWAYS* DI RUMAH SAKIT KATOLIK BUDI RAHAYU BLITAR
